Dear «Salutation»,

It's easy to forget the potential dangers of electricity, especially when electricity cables are buried underground, out of sight is out of mind. Due to recent incidents where disturbance and some damage has occurred to Powercor assets, it is timely to remind you, the conditions for working in the vicinity of Powercor underground cables.

Powercor Australia is a member of the Association of Australian **Dial Before You Dig Services Limited** - a non-profit body dedicated to helping protect Australia's underground networks. If you are planning to dig where electricity or other underground network cables may be located, contact the Dial Before You Dig Service on **1100** or [visit the Dial Before You Dig website](#). Your request is referred to Powercor and other members of the service without you needing to make extra phone calls. Powercor will respond within two working days with plans and information about the location of underground cables.

Once you have the necessary information to plan your work you need to be aware of the conditions for working in the vicinity of Powercor's underground cables. Following the attached conditions will reduce the risk of personal injury to contractors, the public and physical damage to the electricity assets.

It's in the interest of everyone that your projects are completed in a safe manner, which will contribute to the overall success of the project. Remember that it's your responsibility for health and safety and that safety should never be compromised to get the job done.

Should you wish further information please contact Colin Jenkins on phone 5327 2360

Yours faithfully

Mick Belcher  
Network Connections Manager  
Powercor Australia Ltd.
