

This little inconvenience will bring big things.

**Work in progress:
Solar Hotspots Program
March - June 2021**

We're helping customers make the most of their rooftop solar.

We manage the network of poles, wires and infrastructure that supplies electricity to homes and businesses. We also support customers like you who might be looking to install rooftop solar.

Connecting and exporting solar back into the electricity grid is increasingly important for our customers, so we've fast-tracked upgrades in 9 hotspot locations - including yours, where demand is high.

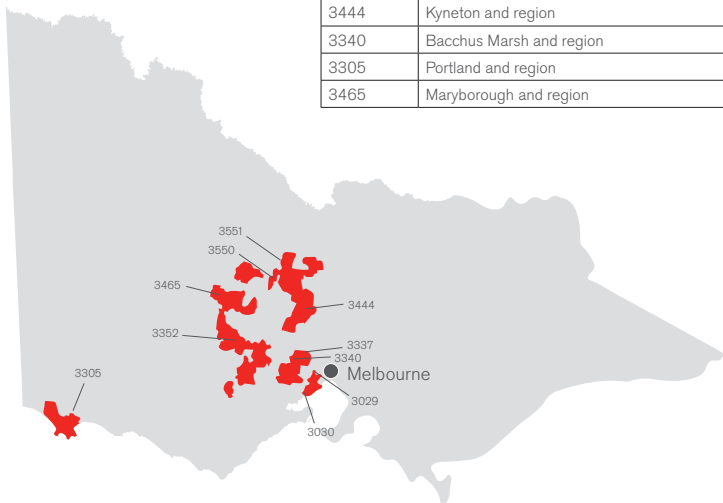

Between March and June, we'll be progressively upgrading our network across these hotspots. The aim is to improve power quality and reliability for all residents in the region - as well as increase the solar export capacity for around 50,000 homes and businesses.
